

TIS GRUPA

DTM

Digital Transaction Management

What is Digital Transaction Management?

DTM is a set of software solutions which includes legally compliant electronic signatures, authentication and identity proofing, managing and tracking documents flows, conducting secure transactions and ensuring secure storage of data.

Sign it

your way... your place... your time... your device

Protects document integrity making changes always visible

Optionally show geolocation and a trusted time stamp

Digital certificate proves source of the digital document

Encrypted asymmetrically using a public key directly while the signature is being recorded

TIS eSIG

TIS eSIG is a multi-platform digital signature solution. E-signing is possible by digital certificate, handwriting and HTML5 signature.

SIGN in the branch or shop

Use signature monitors, signature pads, tablets or smartphones to capture handwritten signatures.

Real-time biometric signature verification.

SIGN directly in the field

Use tablets or notebooks with smartphones even when you are offline.

SIGN IT REMOTELY

J. Smith

SIGN on your own device (external)

Get documents signed remotely directly on the users device simply in the Web browser.

SIGN internal, online in the office

Send e-signing requests for one or more documents to internal or external recipients within a single transaction.

TIS LiveID

Combine online customer engagement, collaboration tools, customer identification and realtime e-signature on documents with a single video-based online platform.

Online Sales, Onboarding and e-Contracting

The clients use the software to advise interested users online and to convert them to real users. User online onboarding is in compliance with the regulatory national specifications against money laundering (eKYC process).

Live ID Benefits:

- attract and identify new customers online
- remotely sign document in real time
- handle very complex business processes
- variety of collaboration and sharing tools
- allows video recording

**All in one package:
engage, identify, sign, and sell!**

Why DTM and TIS:

With its long-standing presence in the IT market, TIS has profiled itself as a valuable and responsible partner to numerous domestic and foreign companies in the projects of developing, implementing and adapting information systems to the business challenges they face.

Therefore, TIS can provide various services using 30 years of experience, services such as:

- Consultancy services
- Health checks
- Architecture designs
- System optimisation, modernization and integration
- Requirement Discovery and Definition
- Solution Design and Implementation
- Training and Best Practices Advisory
- Ongoing Support and Outsourcing

DTM solutions are based on the SIGNificant technology of the Namirial Group, which is compliant to the legal standards of the EU and ISO directives.
