

Bluebird Health-check & Discovery

Bluebird IT Solutions specialises in IBM Managed File Transfer, Business to Business Integration, and Business Process Management solutions. We have worked with IBM Sterling for over 25 years, and with a team of 30 + IBM Sterling specialists, we have technical capability across the IBM Sterling B2B and MFT portfolio. We deliver services including design, development, implementation, project management, training and technical support.

Based on our experience with IBM sterling, we have developed a set of Bluebird Health-check & Discovery Offerings to help organisations get the most out of their IBM Sterling investments.

Discovery Workshop

At the core of all of Bluebird's Health-check & Discovery Offerings is our Bluebird Discovery Workshop. This free of charge workshop is an essential part of our process, and allows Bluebird to get a full understanding of your IBM Sterling environment. We forensically investigate all integrations, mission critical systems and any potential risk areas.

Bluebird B2B and MFT System Health-check

The Bluebird Sterling B2B and MFT System Health-check offering provides your organisation with analysis of your current IBM Sterling B2B and MFT environments. The purpose of the activity is to evaluate implemented systems and procedures, and to offer tailored suggestions to improve the efficiency of mission-critical systems.

Bluebird B2B and MFT System Stress Test

The Bluebird B2B and MFT System Stress Test offers a thorough evaluation of an organisation's existing systems to identify overall stability and reliability. We will discover any possible performance bottlenecks or operational issues relating to IBM Sterling, and we include a score card assessment of your IBM Sterling environment.

Bluebird Health-check & Discovery Offerings

Business Process Workflow Audit

Bluebird's Business Process Workflow Audit includes a review of the design of implemented workflows to determine its efficiency, reusability and maintainability. Bluebird will review individual business processes and map on to known best practices to improve processing time, usage, memory consumption, error handling and notifications that have been implemented.

Bluebird Health-check & Discovery

Bluebird Health-check & Discovery Key Activities

- High-level discovery of business needs to highlight issues and gaps between business needs and current IBM Sterling B2B and MFT solutions.
- Analysis of existing IBM Sterling B2B and MFT environments, including architecture and business processes.
- Identify individual file transfer and business process bottlenecks.
- Diagnose technical issues and challenges related to each client's individual IBM Sterling B2B and MFT environment.
- Determining gaps in technology including versions, compatibility, or new solution alternatives
- Review of purging, archiving, indexing and recovery activities.
- Explore file transfer visibility and transparency within the IBM Sterling B2B and MFT solutions in order to recommend best practices for file transfer monitoring and notification.
- Audit of testing procedures in place, which includes system stress, functional and regressive testing procedures and scenarios.
- Analysis of the current technical and operational set up to highlight optimisation, support, training or resourcing requirements.

Bluebird Health-check & Discovery Deliverables

Following the initial discovery, and depending on which services were performed, Bluebird's team will analyse the collected data and deliver a comprehensive report that covers the following:

- Executive summary of workshop findings.
- Description of tasks and steps performed during the health check.
- Thorough analysis of discovered system weak points, errors and warnings ranked by severity.
- List of any identified performance bottlenecks.
- Recommendations for B2B and MFT system optimisation and improvement.
- Identified scenarios for system stress or regressive testing.
